

SMART PRO™ The Smart Choice

Advanced Diagnostics, the **worldwide leader in key programming software**, is pleased to introduce the Smart Pro Mercedes Solution for programming slot keys compatible with Mercedes® models produced from 1996 to 2014.

The Smart Pro Mercedes Solution is a kit that consists of:

- 1.) ADC-260 Mercedes Smart Programmer that connects to the customer's Smart Pro device via USB cable and comes equipped with an emulator key
 - The key emulator simulates the original key to read data from the car immobilizer. It perfectly fits the ignition unit of vehicles supported by this solution.
 - The base station features an infrared slot for key reading and writing. It lodges in the Smart Aerial slot at the back of the Smart Pro.
 - The device is connected to the Smart Pro via USB port.
- 2.) ADS-2298 Mercedes Software that is automatically activated when the ADC-260 Smart Pro Programmer is connected to the Smart Pro
 - The software shows the unused slots among the 8 keys available on a Mercedes* vehicle to avoid overwriting an existing working key.
 - Choice of standard OBD or emulator key procedure to ensure maximum vehicle coverage.
- 3.) 2 each of POD-BENZ-4B1 Ilco Look-Alike® slot keys (keys also sold separately).
 - Similar design as the original key.
 - Ready-to-program with the PCB, infrared technology and emergency blade HU106 included.
 - 4 function buttons for lock, unlock, trunk release, and panic.
 - Infrared technology allows you to automatically open and close the windows just like original keys.
 - Possibility to reset and rewrite the key in case of mistakes while programming.
 - Default key configuration is 315MHz, but a frequency of 433MHz can be set in the markets where allowed.

Guided Procedure

The Smart Pro guides you step-by-step through the programming procedure. You can read data either from the OBD cable, which is always connected to the vehicle when programming, or from the immobilizer unit using the key emulator.

Online Connection Needed

The Smart Pro must be connected to the internet and an original key is required to complete the procedure. Data is decrypted from the original key and encrypted into the Ilco Look-Alike® Remote key via a cloud solution. The password needed to complete the programming procedure is calculated in the background by the system. Its retrieval requires no additional costs.

No Tokens Needed

The Mercedes® Solution is always available to customers purchasing the ACD260 Smart Programmer. No additional tokens are required.

Available	August 2021
